

MAT 551: Algebra I

Exercise Sheet 4

Stefan Kohl

May 27, 2011

Due: Monday, June 6, 2011

Exercise 16 (Version 7): Let $G < (\mathbb{R}, +)$ be the subgroup formed by those numbers in whose decimal expansion the odd digits (1,3,5,7 and 9) occur only finitely often.

Find out about the group G as much as you can. You will hand in your written answers on June 6. Further you will give a short (about 5 minute) talk about your findings on June 8 and answer a few questions on them at the blackboard. It is allowed to use a computer algebra system such as **GAP**. (Credits: unspecified, depends on what you do and how you present it.)
